

DFS starting from f

Obs. If there is a path from  $s$  to  $t$  in  $G$ , then DFS on  $G$  starting from  $s$  will find a path from  $s$  to  $t$ .

# DFS

- Bottom-up analysis of graphs  
ex. Computing optimal  
Strategies for games.
- Path-finding in graphs.

dfs( $G, s$ )

visited[v]  $\leftarrow$  false for all  $v \in V(G)$

stack  $\leftarrow \{s\}$

while stack  $\neq \emptyset$

$v \leftarrow \text{pop stack}$   $\leq m$  times

    if visited[v] is false

        visited[v]  $\leftarrow$  true

        for each  $v \rightarrow u$  in  $G$

            if visited[u] is false ( $\leq m$  times)

                Push u into stack

This loop

is executed

$\leq 1$  times for

each vertex v

Claim. The number of times a vertex v is pushed into the stack is at most the number of incoming edges into v.

$$G = (V, E)$$

$$n = |V|, m = |E|$$

Size of a graph  $\leq n + m$

The best-case we can hope for, in general, to visit all vertices is  $(n+m)$  steps

Claim. DFS takes  $O(n+m)$  time

Assumption the loop for each  $v \rightarrow u$  can be executed in  $O(\text{outdeg}(v))$  time.

10  $\rightarrow$  2  $\rightarrow$  3  $\rightarrow$  4  $\rightarrow$  ...  $\rightarrow$  100

Example

dfs( $G, a$ )

Push a

Visit a

Push c

Push b

Visit b

Push e

Push d

Visit d

Visit e

Push f

Visit f

dfs (G, t)

Stack

Sudoku

Path finding

$(G, s, t)$

Find a path in  
 $G$  from  $s$  to  $t$ .

What is  $G, s, t$  for Sudoku?

$t$

1	2	4	3
3	4	2	1
2	1	3	4
4	3	1	2

## Neighbors of $v$

Take topmost, leftmost empty cell

Fill all possible values on that cell.

In + + + graph

There are vertices  $u$  and  $v$   
s.t there are multiple Paths from  $u$  to  $v$ .

In Sudoku graph  
if there is a path from  $s \rightsquigarrow v$   
then this path is unique.  
(Hw. Prove!)

A hand-drawn 9x9 grid representing a 3x3 matrix of 3x3 submatrices. The columns are labeled 0 through 8 at the top, and the rows are labeled 0 through 8 on the left. The grid is divided into three vertical sections of three columns each and three horizontal sections of three rows each, creating a 3x3 grid of larger blocks.
